KÜBLER WORKWEAR

Inspired by your job.

Those who work hard also deserve the best workwear. Since 1956, we at KÜBLER have been doing everything we can to ensure that our workwear supports its wearers in every respect.

Inspired by the challenges of their everyday working lives, we pursue the vision of developing exceptional products that specifically support physical processes.

With a unique combination of intelligent functions, selected materials, modern design and clever equipment details, we ensure that industrial workers, craftsmen and labourers feel completely comfortable when working - the best prerequisite for constant top performance. With success, after all KÜBLER is one of the leading workwear suppliers in the industry.

Designed and developed in Germany.

KÜBLER Workwear is developed exclusively at our headquarters in Germany. We employ over 60 highly qualified seamstresses, in addition to our design and product development departments.

GREEN BUTTON

The Green Button is a state seal for sustainable textiles. It systematically checks whether companies take responsibility for human rights and environmental standards in their textile supply chains. In addition, recognised seals must demonstrate that the respective product has been manufactured sustainably.

We have passed the Green Button 2.0 test and therefore meet the advanced requirements of the textile label. With the label, we also demonstrate that we promote living wages, set sustainability goals and identify and address risks in our textile supply chains by systematically analysing them. In future, our products certified and labelled with the Green Button will only be made from approved fibres.

WE CARRY PRODUCTS CERTIFIED WITH THE

**GREEN
BUTTON**
GOOD FOR PEOPLE.
GOOD FOR NATURE.

OEKO-TEX®-STANDARD 100

Our aim is to offer products that are harmless to health and at the same time highly functional. Here, it is very important that the fabrics used are well tolerated by the skin. The clothing must not contain any substances that are harmful to health, especially if worn for long periods of time during heavy physical work. Our products are therefore tested for harmful substances and almost all have the OEKO-TEX® Standard 100 certificate.

AMFORI BUSINESS SOCIAL COMPLIANCE INITIATIVE

We believe that decent wages and reasonable working hours are self-evident and absolutely necessary for the quality of life of our employees. We do not accept child labour or working conditions that restrict people's freedom or oppress people.

amfori 
Trade with purpose

That is why we are members of amfori, the world's largest business association for free and sustainable trade. With the help of amfori BSCI, we improve the social conditions of our supply chain.

Controlled the highest quality.

Our products and services contribute significantly to the success of our partners and live up to what the name KÜBLER promises: highest quality.

By constantly optimising our processes, we aim to always perform at our best and offer our customers only perfect products and the best possible service. For this, we are well prepared: certification according to ISO 9001:2015 AND ISO 14001:2015 by the German TÜV-Rheinland confirms that our quality and environmental management meets the highest requirements of the international standard.

Engaged in the industry.

We are an approved supporting member of the Gütegemeinschaft Sachgemäße Waschpflege e.V.

KÜBLER
WORKWEAR

WELCOME TO OUR WORLD

PASSION FOR INNOVATION.

Since 1956, with a lot of experience and tradition, but also with at least as much passion, inventive spirit and many ideas, we have been developing innovative workwear which is designed to make work easier and safer, but at the same time also sets new trends. Innovation is the key to our success and you will find it in our products and service, but also in our way of working. No coincidence, then, that KÜBLER is among the market leaders in workwear in Europe today

Road construction, industry, services, logistics, gardening and landscaping, wood processing, electrical or construction, our comprehensive product portfolio convinces workers in all sectors with professional, highly functional products and smart accessories. Our customers are also enthusiastic about the numerous additional services, such as personalised workwear and effective support in sales and marketing. We are also happy to share our extensive expert knowledge at PPE training courses.

MADE BY PROFESSIONALS FOR PROFESSIONALS

DESIGN MADE IN GERMANY.

Our family business is based in Plüderhausen, Germany. 30 kilometres south of Stuttgart, 230 highly motivated and competent employees do their utmost every day to design and produce workwear of the highest quality.

Our products are designed and developed exclusively in Germany. More than ten permanently employed specialists work in our product development and design department on new ideas for even more wearing comfort, better protection, fascinating functionality and even more beautiful design.

Unique in the industry are the sewing machines that hum every day in our in-house production. Over 40 highly qualified seamstresses ensure our high standards of quality and ensure that we can respond quickly and flexibly.

In addition, thousands more skilled workers work for KÜBLER at various production sites worldwide. This allows us to guarantee long-term and flexible production resulting in an optimal price-performance ratio for our customer.

Our wide selection of work and protective clothing as well as Corporate Wear combines modern, individually adapted design with high functionality.

KÜBLER CAMPUS

ON BEHALF OF SAFETY.

We are happy to share our extensive know-how and our many years of experience in the field of occupational safety and protection. This is why we have founded KÜBLER CAMPUS and offer PPE training courses. We adapt these training courses to your personal interests.

Our KÜBLER CAMPUS seminars cover relevant topics such as, for example, legal duties according to the latest regulations, liability risks, standard specifications for the most diverse hazardous situations and the personalisation and maintenance of protective clothing. Here, theoretical fundamentals are explained and demonstrated using realistic product experiments.

SAFETY COMES FIRST.

Safety awareness in modern companies is constantly increasing. Employers have recognised that investing in personal protective equipment is not only inevitable due to legal requirements and for liability reasons, but that it also has a positive effect on business results. Because employees who wear suitable protective clothing and feel good and safe in their work clothes are more motivated, more productive and drop out less often.

Employers are obliged to carry out a so-called risk inventory for every workplace. From this, the requirements for organisational and technical protective measures result. The right number of high-quality, individually appropriate and special working conditions PPE is a prerequisite for successful use to prevent accidents and occupational diseases..

PRACTICE-ORIENTED AND WELL ADVISED.

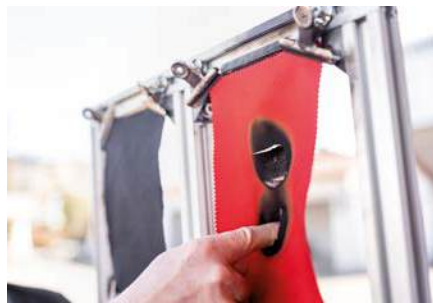

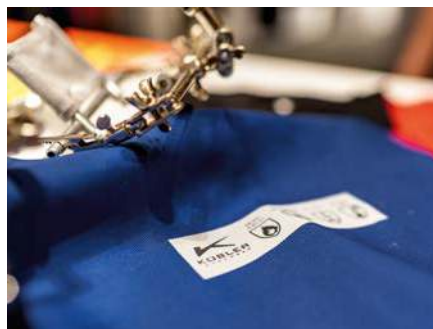

The complex product range requires a high level of expertise. Increase your turnover with up-to-date know-how and well-founded sales arguments. In our workshops, we are happy to pass on our expertise and make your team fit for the next appointment with a customer using many real-life examples and live demonstrations.

AN OVERVIEW OF THE CONTENT:

- PPE regulation, reliable advice, liability
- Hazard assessments, standards and appropriate product solutions
- PPE personalisation
- Cleaning and maintenance, limits of use

ACKNOWLEDGED AND CONFIRMED.

As a VDSI member, participation in our training will earn you two points for the VDSI refresher certificate.

COLOUR, DESIGN AND FUNCTION

OUR WORKWEAR CAN DO MORE.

Workwear from KÜBLER not only looks good, but has much more to offer. Thanks to the large number of sizes, every figure will find the appropriate outfit. The numerous colour combinations of our extensive range are optimally coordinated and ensure that our products can be optimally combined. Optical eye-catchers such as reflective piping and contrasting inserts shape the silhouette and attract attention. Intelligent cuts, smart pockets and the functional equipment also meet every requirement.

EasyBrand

Your workwear should fit you and your company perfectly? Then 'EasyBrand' is just the thing for you. Embroidered, sewn on or glued on - logos and text are sure to find an optimal place.

Our JACKETets can be personalised easily thanks to flexibly designed, partly even completely removable pockets and cleverly placed openings in the lining.

The intelligent cut and numerous free areas on the back, collar, sleeves and trouser legs create the optimal conditions for personalised workwear with great recognition effect.

Reflect It

Using cleverly placed design elements, reflective piping and retroreflective KÜBLER logos, we make sure you stand out all around. The reflective elements located on the front, back and sides of our workwear are not only real eye-catchers, but also ensure a sporty and dynamic appearance. In our PPE clothing, we use only certified reflective material from well-known manufacturers.

The reflective stripes placed in body-language look ensure optimal visibility from every perspective, even in poor lighting conditions.

StylePoint

First impressions count. That is why we attach great importance to our workwear being modern, stylish and precisely fitting.

Various decorative seams, design elements, contrasting and reflective inserts and numerous colour combinations ensure that there is the right design for every taste. Moreover, close-fitting fits ensure an athletic, sporty silhouette.

AntiScratch

With 'AntiScratch', scratches on sensitive fabrics are a thing of the past. Soft Velcro, inward-turned zips, covered buttons and fasteners, elastic covered zip ends ensure that smooth, sensitive fabrics are not easily damaged and at the same time can be washed well in the washing machine.

HardZone

Our workwear can take a beating. Because we know where clothes can use reinforcements. CORDURA® reinforcements, extremely robust and tough fabrics that repel dirt, extra-wide belt loops, safety seams and extra-reinforced load points protect exposed parts of the garment and ensure that you can enjoy your favourite workwear for as long as possible.

SmartPocket

Our intelligent pockets show how much better you can work when everything is perfectly organised. Always at hand: enough and safe storage space in precisely fitting places. Inner or outer, napoleon, holster or smartphone pockets, point-fixed ruler and thigh pockets with volume pleats, in short: everything has its place thanks to the multiple options.

BeSafe

Workwear with the 'BeSafe' distinction is all about certified protective clothing that reliably protects against special hazards. Our comprehensive PPE range offers safe solutions for use in a wide variety of hazardous situations.

ProClean

Up to everything: 'ProClean' products are excellent for industrial laundering and professional cleaning. In addition to functionality, fit and design, this workwear fulfils special requirements: it must be durable and long-lasting, must not shrink or widen, and must withstand extreme cleaning without changing colour.

Smart over-grip options and stretchy, wide openings ensure easy access to pockets, while snaps, flaps, zips and Velcro fasteners ensure as much security as possible.

Incredibly convenient are our certified pockets for knee pads. They can be quickly filled with protective pads. This makes work in kneeling positions much more pleasant.

ComfortZone

'ComfortZone' optimises freedom of movement with numerous ergonomic details and ensures optimal wearing comfort with many features. Well thought-out, body-optimised cuts with movement-friendly sleeves and trouser legs, as well as special movement zones at the elbows, shoulders and knees promise an ideal fit. You can move optimally thanks to elastic inserts and special pleats. Soft knit cuffs, longer back panels, beard and chin protection and lightweight fabrics ensure that our workwear is comfortable all round.

SmartRepair

Products with 'SmartRepair' are made so intelligent that individual parts can be replaced easily and quickly. Smaller damages that can occur in industrial cleaning processes can be repaired without any problems.

Stretch It

Let's move! Cleverly placed stretch zones and elastic inserts in trousers and jackets guarantee maximum freedom of movement. Elastic fabrics ensure unrestricted wearing comfort and comfortable working in any position.

90% polyamide,
10% elastane,

KÜBLER SHIRTS

**ALWAYS FIT.
OVER OR UNDER.**

Whether it is a long- or short-sleeved shirt, a shirt or a jumper, at **KÜBLER SHIRTS** everybody will find the appropriate garment. The numerous colours are harmoniously coordinated with KÜBLER's colour palette and perfectly match our trousers and jackets. Moreover, our basics are very dimensionally stable and colourfast and can be industrially washed. This is confirmed by the test according to EN ISO 15797.

PERFECT WORKING CLIMATE. **KÜBLER WEATHER**

Adverse conditions such as cold, wet, wind and darkness demand maximum effort not only from you, but also from your workwear.

KÜBLER WEATHER workwear is specially designed for these extreme conditions. Whether wind- and waterproof materials or optimal cold and warning protection - all our product lines are particularly robust, breathable and supplemented by numerous functional details that make every challenge easier for you.

Look forward to your next outdoor assignment: with KÜBLER WEATHER workwear.

STANDARDS

PERSONAL PROTECTIVE EQUIPMENT (PPE) FROM KÜBLER

In extreme weather conditions, bad visibility and hazardous conditions, such as heat, flying sparks and high voltages, normal occupational clothing quickly reaches its limits. Personal Protective Equipment (PPE) must be used in certain hazardous areas. KÜBLER understands that PPE must be comfortable and well thought out, despite its extreme areas of use.

NOT ALL PROTECTIVE CLOTHING IS CREATED EQUAL

Your safety is always our top priority. Therefore it must be first determined what the protective clothing will be needed for. Employers are legally obligated to carry out a hazard analysis for each workplace in accordance with the German Occupational Health & Safety Act (ArbSchG sections 3, 4). Using this analysis, the company's Safety Officer will draw up a summary of which workplaces require Personal Protective Equipment to what extent and which hazards this protective clothing must protect against.

Then we come into play: We can recommend the right protective clothing in accordance with the above defined specifications of the protective standard the clothing must comply with.

KEY FEATURES OF PERSONAL PROTECTIVE EQUIPMENT (PPE)

PPE IS DIVIDED INTO 3 CATEGORIES:

PPE is assigned to Category I if it protects against simple personal risks, such as rain clothing, for example. This category is not subject to the EC quality assurance system. Clothing is regularly monitored by us to check standards are being adhered to.

PPE is assigned to Category II if it doesn't fit into Category I or Category III. This PPE protects people in hazardous areas which are considered to be of moderate risk. Examples of such clothing are high visibility clothing and clothing for slight thermal protection. Category II PPE must be certified by an external body and issued with an examination certificate. It is not subject to the EC quality assurance system.

Complex PPE which protects against high or even fatal risks is assigned to Category III, such as clothing for thermal protection or against the thermal hazards of an electric arc, for example. Category III PPE must always be certified by an external body and issued with an examination certificate. It is subject to the EC quality assurance system, where the external certification body repeats the tests at regular intervals.

SUBSEQUENT FINISHING OF PROTECTIVE CLOTHING

Particular care is required for any additional finishing on protective clothing, such as logos, emblems, embroidery and reflective stripes. The use of unsuitable material may reduce or even negate the protective effect of the clothing. The examination certificate may be voided. All changes and accessories must be checked before they are implemented for their effect on the protective functions.

FINISHING ON CATEGORY III PPE

Any change to the design of the protective clothing, including any additional finishing, from the type examination must be reported to the testing institute which carried out the type examination assessment. The changes will be tested there and filed with the type examination certificate. After this the manufacturer may grant approval for the changes or carry them out.

FINISHING ON CATEGORY II PPE

A decision whether a change may be carried out may be made without the testing institute for Category II PPE, under more stringent consideration of the standards with regard to the protective functions.

IN ORDER TO AVOID ANY RISK, PROTECTIVE CLOTHING SHOULD ONLY BE FINISHED BY THE MANUFACTURER.

In cases of doubt, the protection and safety of the wearer must be placed above design.

WHAT IS AN EXAMINATION CERTIFICATE?

An examination certificate is the authentication and detailed test report of a certified product. It will note the item's description, the materials used and the protective standards. The validity of these certificates has been restricted to 5 years since 2010.

WHAT DOES THE LAUNDRY LABEL TELL YOU?

There are particular requirements for laundry labels for PPE. They must not only state the name and address of the distributor, the item number of the product and the composition of the material, but also additional information regarding the protective standards.

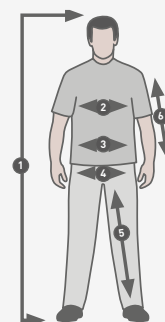

THE PROTECTIVE STANDARDS MUST BE STATED WITH PICTOGRAMS AND CLASSES.

The "CE" mark means that it is a certified item of clothing. The four digit number, which must be included for Category III PPE, is the number of the responsible testing institute.

An "i" means that the item of clothing comes with an information brochure containing important information.

Measurements are depicted with a figure.

EN ISO 13688

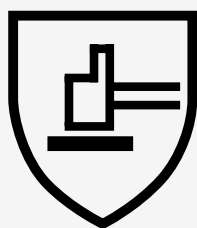

PROTECTIVE CLOTHING - GENERAL REQUIREMENTS

This standard regulates the general requirements for ergonomics, ageing, sizes and marking of protective clothing. Clothing must be developed to provide the user with maximum comfort. The components and materials used may not have any undesirable side effects, i.e. they must not cause any allergies, inflammation or injuries. In order to guarantee this, all materials used must be tested or be OEKO-TEX® certified.

EN 420

PROTECTIVE CLOTHING - GENERAL REQUIREMENTS

This standard regulates the general requirements for the design and construction of gloves, as well as their innocuousness, wearing comfort and performance. In addition to the labelling and information requirements of manufacturers, it also determines the relevant test methods to be used.

EN 388

PROTECTIVE GLOVES AGAINST MECHANICAL RISKS

Criteria for protective gloves against mechanical risks are listed in EN 388. Four aspects of mechanical stress are defined: Resistance to abrasion, blade cut resistance, tear resistance and puncture resistance. Gloves are tested in accordance with these criteria and are given a performance level from 1 (lowest) to 4 (highest) (except for blade cut resistance which has a highest performance level of 5). A hammer symbol, the name of the standard and the four performance levels of the protective glove are used to indicate the performance level of a protective glove against mechanical risk.

EN 343

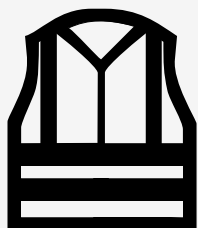

PROTEZIONE CONTRO LA PIOGGIA

I valori più importanti sono la resistenza alla penetrazione dell'acqua (impermeabilità) e la resistenza alla penetrazione del vapore acqueo. Questi valori sono misurati sui materiali utilizzati e sulle cuciture. Ne risulta la classe in cui è classificato l'indumento. Questo indumento è contrassegnato dal simbolo di protezione dalle intemperie, seguito dal numero della norma e dalle classi corrispondenti.

- Y: Classe di resistenza alla penetrazione dell'acqua
- Y: Classe di resistenza alla trasmissione del vapore acqueo
- R: Indumento finito testato nella torre della pioggia (opzionale*)
- * Se l'indumento non è stato testato, R è sostituito da X.

X

**HIGH VISIBILITY
CLOTHING IS LABELLED
WITH THE GRAPHICAL
SYMBOL
ISO 7000-2419.**

X: Quantity of visible materials (background and reflective material). The number next to the graphical symbol (here X) specifies the clothing class.

EN ISO 20471 HIGH VISIBILITY CLOTHING

Clothing under this standard is intended to provide conspicuity of the wearer in any light condition when viewed by operators of vehicles from all sides and so that the wearer is recognisable as a person. This standard applies to high risk situations. The situation is always classed as high risk, for example, if a person is not actively taking part in the traffic situation, but rather is occupied with other things (work or an emergency situation) i.e. is a passive road user.

THE 3 CLOTHING CLASSES ARE GRADED AS FOLLOWS:

HIGH RISK CLASS 3

Wearer is a passive road user, vehicle speed is $> 60 \text{ km/h}$

HIGH RISK CLASS 2

Wearer is a passive road user, vehicle speed is $\leq 60 \text{ km/h}$

HIGH RISK CLASS 1

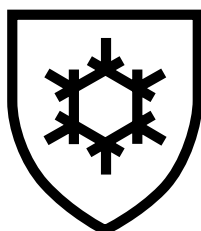

Wearer is a passive road user, vehicle speed is $\leq 30 \text{ km/h}$

At vehicle speeds of $\leq 15 \text{ km/h}$ there is only a moderate risk for passive road users. It is important to bear in mind that local influences, such as weather conditions, amount of contrast with the surroundings, volume of traffic and other factors, could lead to the level of risk being increased to a higher level.

CLOTHING OF THE DIFFERENT CLASSES MUST MEET THE MINIMUM REQUIREMENTS FOR MATERIAL QUANTITY:

BACKGROUND MATERIAL (Yellow / orange-red / red)	CLASS 1 0.14 m ²	CLASS 2 0.50 m ²	CLASS 3 0.80 m ²
REFLECTIVE MATERIAL (Required length for 50 mm wide stripes)	0.10 m ² (2 m)	0.13 m ² (2.6 m)	0.20 m ² (4 m)

REGARDLESS OF THE MINIMUM AREAS **CLASS 3 CLOTHING** MUST COVER THE TORSO AND AT LEAST EITHER THE ARMS OR HAVE LONG TROUSER LEGS WITH RETROREFLECTIVE STRIPES.

EN 14058 PROTECTION AGAINST COOL ENVIRONMENTS

This European Standard specifies requirements and test methods for the performance of garments for protection against the effects of cool environments above -5°C . These effects comprise not only low air temperatures, but also humidity and air velocity.

CLASS Rct (m²K/W)

- | | |
|---|------------------------|
| 1 | $0,6 \leq Rct < 0,12$ |
| 2 | $0,12 \leq Rct < 0,18$ |
| 3 | $0,18 \leq Rct < 0,25$ |
| 4 | $0,25 \leq Rct$ |

Cold weather protection clothing is not covered by this standard.

Heat transfer resistance Rct (m² K/W) is divided into 4 classes.

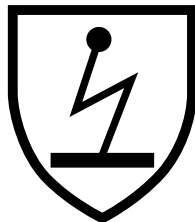

STANDARDS

EN ISO 6330 DOMESTIC WASHING AND DRYING PROCEDURES FOR TEXTILE TESTING

This standard specifies the domestic washing and drying procedures for testing textile fabrics. It stipulates 3 different reference washing machines (Type A, Type B and Type C). There are between 7 and 13 washing procedures depending on the washing machine type. It also specifies 6 drying procedures (A-F). Detergent (reference detergent) and the hardness of the water play a large role in producing a comparable result.

EN ISO 15797 INDUSTRIAL WASHING AND FINISHING PROCEDURES FOR TESTING OF WORKWEAR

This standard simulates the effects of industrial washing on workwear using the described procedures. Provision is made for 8 different washing procedures based on the use of a washer/extractor. Tumble drying or tunnel/cabinet finishing are specified for drying. It is not technically possible to reproduce industrial laundry processes in a laboratory setting. The standard merely provides an approach using intermediate scale equipment to be able to carry out an evaluation. It also advises that testing of the workwear in the actual industrial laundering equipment and processes intended to be used is advisable when finally determining product and process compatibility.

**CLOTHING IS
IDENTIFIED WITH
THIS PICTOGRAM.**

EN 1149-5 ELECTROSTATIC PROPERTIES

Electrostatic discharge results from a surplus or lack of electrons on the surface of a substance or body. This phenomenon particularly occurs in areas where low or non-conductive substances participate in friction or cutting processes, such as the unwinding of paper or fabric from rollers, walking on insulating flooring, bottling liquids and transporting powdery substances in tubes, for example.

How quickly an item of clothing becomes charged is dependent on the material, speed and humidity, amongst others. In order to avoid/immediately dissipate this static discharge either electrostatic dissipative threads are woven into the fabric of protective clothing or a certain amount of electrostatic dissipative fibres are spun into the processed threads.

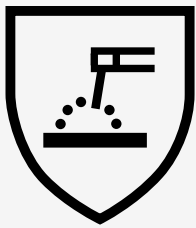

In areas at risk of explosion protective clothing and people may not build up electrostatic charge. Electrostatic dissipative protective clothing is used here in combination with electrostatic dissipative safety shoes on electrostatic dissipative earthed flooring. The protective clothing must fully close and be close fitting. It must not be put on or taken off in areas at risk of explosion.

EN 1149 specifies testing rules for electrostatic dissipative protective clothing to avoid incendiary discharges. The evaluation is carried out in accordance with EN 1149-3:2001.

POSSIBLE USES OF PROTECTIVE CLOTHING IN ACCORDANCE WITH EN 1149:

Chemical/pharmaceutical industry | Refineries | Fuel depots | Blending facilities | Paint shops | Mills | Mixing plants and conveyors | Emptying silo trucks

PLEASE NOTE: Non-conductive additional components on the outer side of clothing, such as labels, customer logos and reflective stripes may not be wider than 5 cm, must be restricted to a maximum area of 10 x 10 cm and be permanently affixed to the clothing. Additional components that exceed these sizes must have test data to evidence that flammable discharges cannot occur in unfavourable conditions.

EN ISO 11611 PROTECTIVE CLOTHING FOR USE IN WELDING AND ALLIED PROCESSES

This international standard regulates the performance requirements for clothing which should protect the wearer when welding and carrying out associated activities with comparable risk, where the wearer is exposed to hazards such as molten metal splashes, short contact time with flame and exposure to radiant heat.

THERE ARE TWO PERFORMANCES CLASSES:

CLASS 1 (LOWER CLASS):

Protection against less hazardous welding techniques and situations causing lower levels of spatter and radiant heat.

Performance requirement: Resistant to at least 15 drops of metal.

Heat transfer (radiant heat) RHTI 24 ≥ 7 seconds.

CLASS 2 (HIGHER CLASS):

Protection when welding in confined spaces and working in forced postures.

Performance requirement: Resistant to at least 25 drops of metal.

Heat transfer (radiant heat) RHTI 24 ≥ 16 seconds.

Certified PPE for the head, face, hands and feet should also be worn for comprehensive protection against all risks which welders are normally exposed to.

PLEASE NOTE: Contamination, such as dirt and perspiration, may affect the protection provided, as well as other factors, such as humidity.

EN ISO 11612 CLOTHING TO PROTECT AGAINST HEAT AND FLAME

CLOTHING IS IDENTIFIED
WITH THIS PICTOGRAM.

Clothing which fulfils the requirements of EN ISO 11612 protects the wearer against short contact time with flame and, to a small extent, against one type of heat transmission. The types of exposure to flame and heat transmission are differentiated as follows:

CODE A Limited flame spread
A1: Surface flame | A2: Edge flame

CODE B Convective heat | Performance levels: B1-B3

CODE C Exposure to radiant heat | Performance levels: C1-C4

CODE D Molten aluminium spatter | Performance levels: D1-D3

CODE E Molten iron spatter | Performance levels: E1-E3

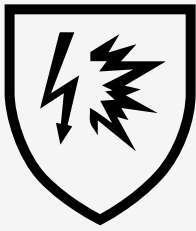

CODE F Contact heat | Performance levels: F1-F3

Heat transmission may occur singularly or in combination. Products which fulfil the requirements of EN ISO 11612 must always meet the flame spread classification A1 or A2 (or both) and that of at least one other letter. The performance level achieved must be stated on the label after the letters. The higher the number, the higher the protection.

POSSIBLE USES OF PROTECTIVE CLOTHING IN ACCORDANCE WITH EN ISO 11612:

Utility companies (electricity, gas, water, district heating, cable technology) | Disposal companies (industrial sludge, mineral oil processing, metal recycling) | Chemical companies | Petrochemical/ refineries | Transport companies (transport of hazardous materials, transport of cooler/warmer hazardous materials) | Areas at risk of overheating and explosion (steelworks, automotive industry, metal working companies, glass processing).

STANDARDS

CLOTHING IS IDENTIFIED WITH THESE PICTOGRAMS. BOTH MAY BE AWARDED

The degree of protection of personal protective equipment (PPE) is determined using box testing (directed arc) or open arc testing (open, undirected arc). Open arc testing results in an ATPV value (Arc Thermal Performance Value, commonly used in the USA/Canada) or an ELIM value (Energy Incident Limit, commonly used in the EU). ATPV measures the incident energy level where there is a 50% probability of the wearer of the PPE receiving a second-degree burn determined using a statistical method. The ELIM value is the maximum thermal energy where the probability that the wearer would receive a second-degree burn is 0%. Both values are given in calories per cm².

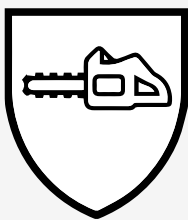

IEC 61482-1-2 PROTECTION AGAINST THE THERMAL HAZARDS OF AN ELECTRIC ARC

This standard defines test methods for protective clothing used in work situations where the thermal hazards of an electric arc may occur. An electric arc arises when an electrical current ionizes gases in the air. It is an unwanted and unpredictable connection occurring between two conductors. Generally this connection lasts for less than a second. An electric arc can be triggered by various things during electrical work: Incorrect handling, technical defects, contamination by foreign bodies in the system, changing weather conditions (e.g. increased humidity). Temperatures can exceed 10,000°C during an arc flash. Suitable protective clothing should largely prevent the thermal hazards of an electric arc. This protection is only afforded when wearing a complete, closed suit. In addition, protective headgear and gloves may also have to be worn, depending on the hazard analysis of the location. The clothing is, however, not electrically insulated protective clothing and it does not protect against electric shock.

Protective clothing against the thermal hazards of an electric arc is divided into two protective classes. These differ depending on the size of the electric arc energy and the incident energy. The electric arc protective classes are indicated with APC 1 or APC 2.

The following table gives an overview of the relevant parameters of each test category:

TEST CATEGORY	Average electric arc energy W_{arc} [kJ]	Average incident energy E_{inc} [kJ/m ²]	Test current [kA]	Electric arc duration [ms]
APC 1	158	135	4	500
APC 2	318	423	7	500

CLOTHING IS IDENTIFIED WITH THIS PICTOGRAM. THE PICTOGRAM MUST BE DISPLAYED IN A CLEARLY VISIBLE LOCATION.

EN ISO 11393-2 PROTECTIVE CLOTHING FOR USERS OF HAND-HELD CHAINSAWS

Protective clothing as per this standard offers protection against cutting injuries in the leg area which can occur when working with hand-held chainsaws. The protective effect is achieved by blocking the chainsaw. The degree of protection depends on many different influences: Speed of the chainsaw, torque of the motor, intensity and duration of contact with the work equipment, angle of impact on the fabric, working position, etc.

THERE ARE 3 DIFFERENT PROTECTIVE CLASSES:

CLASS 1

Chainsaw speed
up to 20 m/s

CLASS 2

Chainsaw speed
up to 24 m/s

CLASS 3

Chainsaw speed
up to 28 m/s

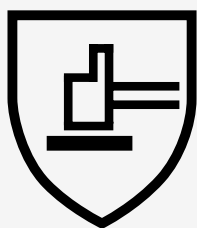

THERE ARE THREE DESIGNS DEPENDING OF THE SIZE OF THE PROTECTION ZONE:

STYLE A + B:

Primarily intended for well trained, professional chainsaw operators to be used for timber harvesting work. The area of protection is almost solely found in the front area of the chainsaw trousers.

STYLE C:

Aimed at those who very rarely work with chainsaws (e.g. Federal Agency for Technical Relief, fire brigade). Chainsaw trousers of design C are equipped with cut protection on the front and back thus offering all-round protection.

EN 14404 KNEE PROTECTORS FOR WORK IN KNEELING POSITION

Knee protection is only guaranteed by combining knee protector trousers and knee pads that have been certified together. With knee protection type 2 this is knee pads that are either fixed in or loosely attached to pockets in the trouser legs.

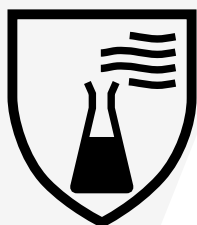

CLOTHING IS IDENTIFIED
WITH THIS PICTOGRAM,
THE STANDARD AND THE
PERFORMANCE LEVEL.

THIS IS DIVIDED INTO 3 PERFORMANCE LEVELS:

LEVEL 0 Ground is even, no penetration resistance

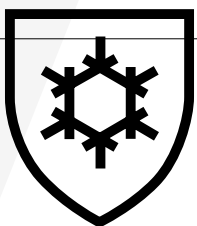

LEVEL 1 Ground may also be uneven, penetration resistance $\geq 100 \pm 5 \text{ N}$

LEVEL 2 Usable even under difficult conditions, penetration resistance $\geq 250 \pm 10 \text{ N}$

EN 13034 TYPE 6 PROTECTIVE CLOTHING AGAINST LIQUID CHEMICALS

This standard provides minimum requirements for limited use chemical protective suits (type 6). It offers limited protection against the effects of liquid aerosols, sprays and splashes of chemicals. This protective clothing is intended to be used in cases where the risk of injury has been assessed as low as the wearer would be able to take timely adequate action when their clothing is contaminated. Protective clothing of this type forms the lowest performance level of chemical protection. Special chemicals must be tested in advance. This clothing is labelled with the pictogram and the standard EN 13034 Type 6.

EN 342 PROTECTIVE CLOTHING - ENSEMBLES AND GARMENTS FOR PROTECTION AGAINST COLD

This standard specifies a baseline for requirements and test methods against cold. Thermal insulation is the most important characteristic here. Wind and physical activity can significantly change thermal insulation. Perspiration should be avoided when spending long periods of time in the cold as the moisture affects the insulation. (Effective thermal insulation value (I_{cler}), AP, air permeability, WP, waterproofness).

The thermal insulation value (I_{cler}) must be stated with the pictogram.

Resultant effective thermal insulation of clothing (I_{cler}) and ambient temperature conditions (in °C) for heat balance

at different durations of exposure:

Insulation: I_{cler} m ² K/W	Wearer standing 75 W/m ²			
	Air speed			
	0.4 m/s		3 m/s	
	8h	1h	8h	1h
0,349*	8	-8	15	0

at various stress levels and at different durations of exposure:

Insulation: I_{cler} m ² K/W	Active wearer in motion

EN 13758-2 PROTECTIVE QUALITIES AGAINST UV RADIATION – PART 2

The European standard serves to determine the UPF (Ultraviolet Protection Factor, i.e. UV Protection Factor) of textiles. Long periods in the sun can cause skin damage. Clothing labelled in accordance with EN 13758-2 protects covered parts of the body against harmful UVA and UVB radiation in sunlight. Testing is carried out on clothing in new condition without any signs of wear to determine the UPF. A UPF of 40 or higher shields up to 98% of UV radiation and thus offers excellent protection.

However, wearing EN 13758-2 certified clothing does not guarantee protection under all circumstances. Certain factors, such as wet or threadbare clothing or clothing which has already been in use for a long time, may impair the protective effect. Please observe instructions on the care label.

The pictogram shows the determined UV protection factor.

CERTAINLY SAFE.

Our high level of PPE expertise and the durable quality of our products mean that you can always feel secure with KÜBLER. Our protective clothing fulfils the latest standards and are tested by some of the most renowned research institutes in Germany.

STFI conducts testing and certification for customers from more than 50 countries and is a member of German and European organisations and textile associations. Its employees are members of international working groups and standardisation committees. KÜBLER has been a close partner of STFI for many years and regularly takes part in audits for new standardisation and testing procedures.

Hohenstein has specialised in testing, certifying and researching textile products of all types for more than 75 years. The family-run company combines tradition with advanced technology and the widely diversified know-how of their employees in unique ways. International partners are reliably assisted with developing and marketing their products.

BG Bau, a statutory liability insurance provider for the construction industry and associated services, looks after more than three million policyholders. Alongside insurance benefits, BG Bau promotes occupational health & safety in the workplace and tests and certifies products and equipment staying true to their principle "A safe product is synonymous with less accidents".

EN 17353

PROTECTIVE CLOTHING– ENHANCED VISIBILITY EQUIPMENT FOR MEDIUM RISK SITUATIONS

Protective clothing certified in accordance with this standard is suitable for individuals working in all areas where enhanced visibility is required, but where high visibility clothing is not required as per EN ISO 20471.

THERE ARE THREE DIFFERENT TYPES:

TYPE A: The risk of not being seen exists only at daylight conditions.
Only fluorescent material is used as the enhanced visibility component.

TYPE B: The risk of not being seen exists only at dark conditions.
Only retroreflective material is used as the enhanced visibility component.

TYPE AB: The risk of not being seen exists during daylight, twilight and dark conditions.
Both retroreflective and fluorescent material are used as enhanced visibility components.

The following products are certified under EN 17353:2020 type B2 if additional reflective stripes have been added (available on request). The additional reflective stripes only serve to provide increased protection and are not an element of the design.

SERVICE

SIMPLY. MORE. SERVICE.

Our work doesn't end with the last stitch, but extends far beyond the boundaries of standard workwear. You can also find numerous practical and helpful services in our extensive range, in addition to the right products.

ONE BRAND. 1,000 POSSIBLE COMBINATIONS

Our products are so perfectly in tune when it comes to colours, designs and materials, that they can be combined together in practically any way. The large variety of colours, wide range of sizes, various price categories, versatile accessories and workwear for all weathers enables result in countless possible combinations so you can find your perfect, individual look. Why not give it a try?

GREAT ACCESSORIES. GREAT JOB.

You can find the right accessories for any requirement in our range from page 150 onwards. From long johns, work gloves, hats and socks to belts and knee pads – we have everything ready that you need for your everyday working life.

RELIABLE MARKETING SUPPORT.

We are happy to help you with your advertising measures – such as mailing campaigns, creation of adverts, catalogue production, individual assistance and designing your showroom.

FIRST CLASS SALES SUPPORT.

In order to support your sales we offer you assistance with designing your range, as well as product and PPE training, which will enable you to increase your turnover due to more know-how and well-founded selling points. We will advise your customers on request, including jointly with you on location. This guarantees you will find the perfect workwear for any requirement.

CORPORATE WEAR

TEAM. WORK. WEAR.

SOLIDARITY COMES TO FRUITION.

CORPORATE WEAR presents the name and image of a company to the outside world and reinforces to the wearer that they are part of a team. It is all the more important that logos, lettering and colours are optimally situated on your workwear.

Give your workwear a unique look, increase recognition and your employees' team spirit.

Our services in this area range from finishing products with logos or lettering all the way up to numerous custom orders for highly individualised products.

Successful companies, such as **VIESSMANN, ASSISTANCE PARTNER, CLAAS AND THE AUSTRIAN FLOOD AND AVALANCHE PROTECTION BARRIER** rely on **CORPORATE WEAR** from **KÜBLER**.

YOUR OPTIONS.	CORPORATE WEAR BASIC	CORPORATE WEAR SPECIAL	CORPORATE WEAR EXCLUSIVE

Colours and fabrics from different product lines may be mixed.		X	
All colours, designs, fabrics and cuts can be freely combined as required.			X

WE MAKE IT FIT.

Too baggy or too tight? Too long or too short? We are happy to make small alterations, such as shortening trouser legs, for example, or considering the option of producing special sizes.

We are also happy to finish our products with logos, trademarks or names in various formats on request.

Please do not hesitate to contact us for more details about materials, terms & conditions and minimum order quantities or for an in-depth consultation.

OUR SERVICES FOR YOUR INDIVIDUAL LOOK

SEWING AND TRANSFER SERVICE

We are happy to attach embroidered badges or transfers provided by you onto our *workwear*.

LOGO SERVICE

Want a badge or transfer for your company? We are happy to create these and provide advice about appropriate quality and optimal placement.

We require the following information:

- Item number, size, quantity of products to be finished
 - Method of application (sewn on, transfer etc.)
 - Required size and position
 - A digital template in a standard format (JPEG, PDF, EPS)
 - Colour specifications using HKS, Pantone or RAL
-

EMBROIDERY

Embroidery is the highest form of textile finishing - noticeable yet unproblematic when it comes to textile care. An embroidery program can be created according to your individual submission and the logo sewn onto the clothing. An embroidered logo can be added to a batch size of one item.

NAME TAPES

With name tapes both the background colour and the letters can be freely selected. Names can be embroidered on woven and hemmed standard tapes. The minimum order quantity is two items per name.

NAME TAGS

With name tags colour of the background, embroidered edge and the letters can be freely selected. Name tags can also come with a velcro strip so they can be attached to velcro. The minimum order quantity is two items per name.

DIRECT EMBROIDERY

This process benefits from premium processing technology and durability. The yarn is directly embroidered onto the outer fabric.

COMPUTER EMBROIDERY

The computer embroidery program has a large selection of fonts and sizes which are embroidered onto the backing fabric, either directly or as a badge.

TRANSFER PRINTS

Transfers are transferable prints and applications which can be quickly and precisely applied to textiles using a heating press. The excellent print quality complies with the high demands of trade and industry.

Name patches can also be transfer printed.

REFLECTIVE ELEMENTS

Finish your workwear with premium reflective material and give your clothing extra visibility.

PLEASE NOTE: Any finishing on protective clothing may negatively influence its protective effects. If necessary, follow-up certification may need to take place.

KÜBLER CLEAN@WORK

In industrial sectors it is common practice to rent or lease occupational clothing. In addition to functionality, fit and design additional requirements are added to the products. The workwear must be durable and long-lasting, remain true to its measurements and not change colour. It also must be able to withstand extreme cleaning requirements.

We offer industrially washable workwear to our customers. We only use materials of the highest quality which are suitable for industrial laundry. Small amounts of damage which can occur during the intensive cleaning processes can be quickly and easily remedied due to the intelligent construction and workmanship of our products

WORKWEAR WITH THE FOLLOWING ICON HAS BEEN TESTED BY AN INDEPENDENT TESTING INSTITUTE IN ACCORDANCE WITH EN ISO 15797.

PROFESSIONAL INDUSTRIAL LAUNDRY

Textiles which are suitable for professional cleaning are shown by a rectangle with **PRO** in inverted capital letters.

WASHING

Each number stands for one of the eight washing procedures described in **EN ISO 15797**. The number of the process that the textile has been tested with has a dark background.

DRYING

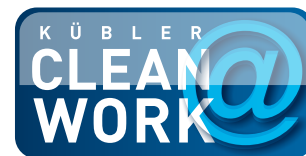

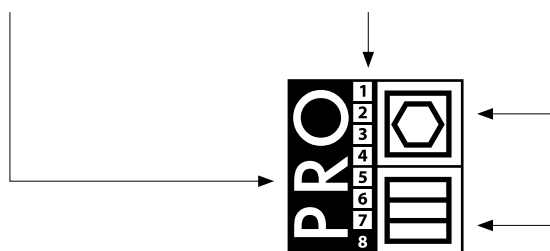

These symbols describe which drying procedures the textile has been tested with.

TUMBLE DRYING

Tumble drying is shown as a square with a hexagon in it.

TUNNEL/CABINET FINISHING

This drying method is shown by a square divided into three equal triangles.

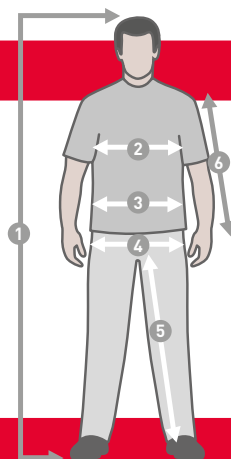

Please note before use KÜBLER CLEAN@WORK products should be subjected to industrial washing tests simulating actual practice. When determining sizes only use clothing that has been previously washed. We are unable to assume any liability for complaints in the event of insufficient washing tests and incorrect size determination.

THE FOLLOWING APPLIES IN GENERAL TO DOMESTIC LAUNDRY:

- Do not overfill the drum otherwise this will effect the outcome
- Use coloured detergent without any optical whiteners for coloured loads
- Make sure all fastenings are closed before washing
- Remove clothing immediately after spinning and smooth out the seams
- Wash with similar colours
- Do not use too high a temperature when tumble drying (sanforized cotton fabric has a tendency to kink and shrink)
- Iron printed and embroidered logos inside out
- Observe the care instructions indicated by the symbol

PLEASE NOTE: Fabric with red and black colouring has a tendency to release excess dye thereby staining light items and fabrics. The colour fastness of clothing when wet must therefore be tested before use.

CORRECT MEASURES:

- 1. Body height:** without shoes, measure from the crown to the sole of the feet.
- 2. Chest measurement:** measure under the arms over the largest part of the bust horizontally around the body.
- 3. Waist size:** measure around the waistline without being too tight.
- 4. Hip size:** measure horizontally around the largest part of the hips.
- 5. Inside leg:** measure the inside of the leg from the crotch to hem.
- 6. Sleeve length:** with slightly bent arms measure from the head of the humerus over the elbow to the wrist bone.

Regarding point 3: waist size is measured at the waistband.
